For Wood Stud & Metal Stud Installation.

FOR LATH & PLASTER: Locate studs & use stud screws or Snap Toggles

FOR BRICK & CONCRETE: Use Alligator Anchors

STEP 1: INSTALL TV MOUNTING BRACKET

Place the TV face down on a soft surface where it is secure and stable. If your TV is already attached to a base, it must be removed before beginning the installation. The VESA holes on the back of the TV are either 4mm, 5mm, 6mm, 8mm depending on the brand of the TV. This kit includes all sizes.

Note: It is very important to select the correct bolt diameter and length.

Attach TV mounting bracket to the top 2 holes using the appropriate bolts. This kit also includes different lengths of each size. Hand tighten to choose appropriate length then use a handheld Phillips screwdriver and tighten until snug.

Do not overtighten.

IMPORTANT

TOO SHORT

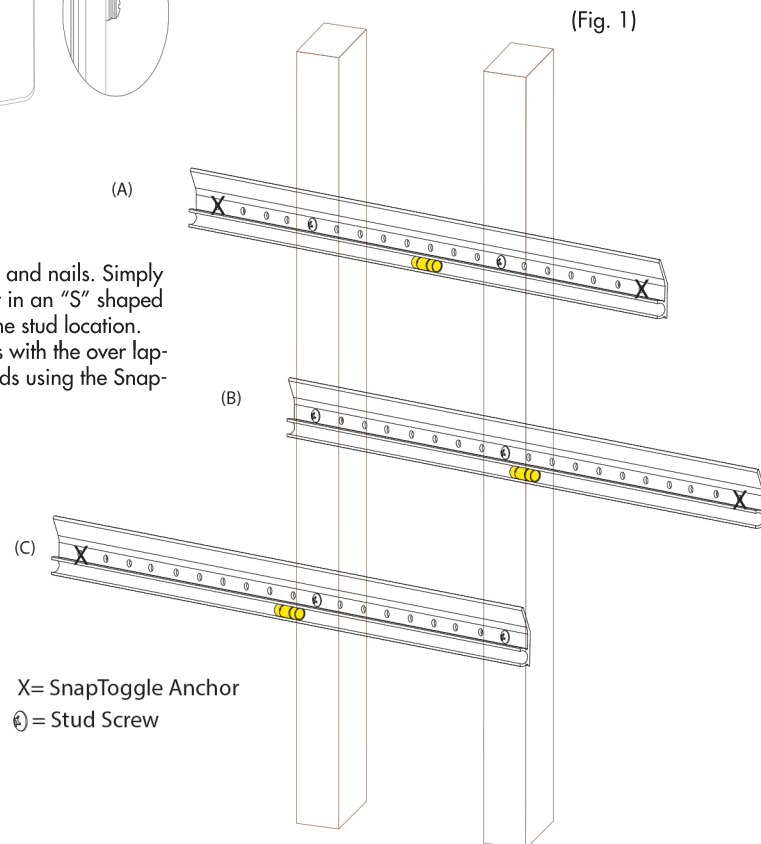

TOO LONG

CORRECT

USE WASHERS IF BOLTS ARE TOO LONG

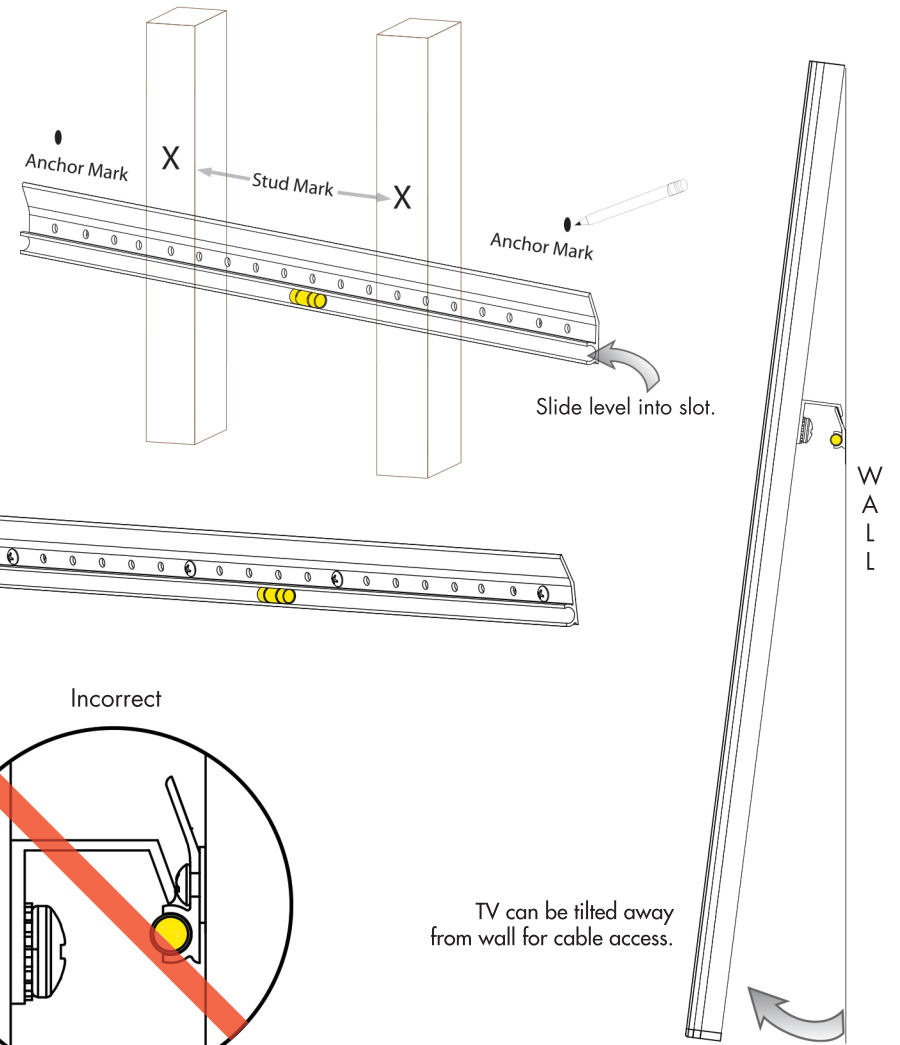

STEP 2: LOCATE STUDS

Locate studs by finding drywall screws and nails. Simply slide the included magnetic stud finder in an "S" shaped pattern until it locates a screw. Mark the stud location. The wall bracket must attach to 2 studs with the overlapping bracket secured on the end or ends using the Snap-Toggle anchor(s). See options A-B-C.

STEP 3: LEVEL & MARK

Insert level into wall bracket. Place wall bracket over studs and mark end holes for the anchor(s). (one or two anchors- see Fig 1)

STEP 4: INSTALL ANCHORS

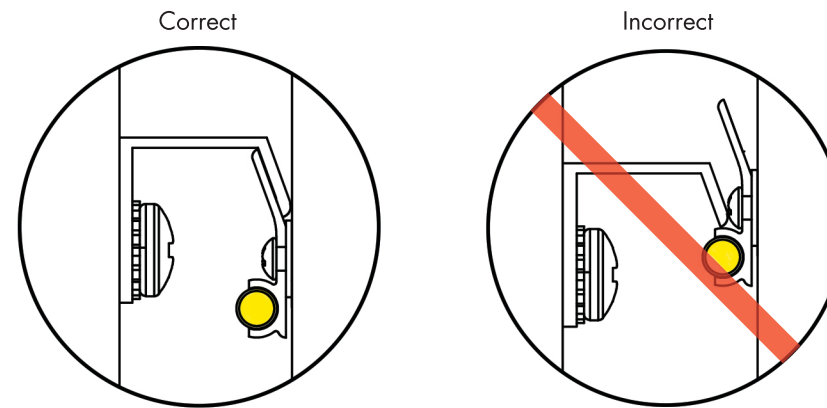

Drill 1/2" holes for the SnapToggle anchors and install either one or two anchors.

STEP 5: INSTALL WALL BRACKET

Install the wall bracket using black self drilling screws for the studs and silver machine screws for the anchors.

STEP 6: HANG YOUR TV

Hang TV by engaging the TV bracket on top of the wall bracket, assuring brackets have engaged correctly. (See below)

TV can be tilted away from wall for cable access.

Security Cable Installation

Insert Cable through the slot on the bracket. Hang your television and insert BearClaw security screw through the eyelet and into the wall.
